Implementing Telehealth So That CMS (and your state) Will Love You!

Register for this **FREE** half-day workshop (included with conference registration) and leave with a complete, practical framework for identifying, designing, and launching telehealth services that will create the outcomes CMS seeks and actually deliver results for your rural community.

With $50 billion in Rural Health Transformation Program funding beginning to flow to states, the timing to quickly launch telehealth services has never been greater. But speed without structure is a recipe for failure — and in the RHT program, failure doesn't just mean poor outcomes. It means clawbacks.

Most healthcare organizations are skilled at running the services they already have. Expanding into new service lines is a different challenge entirely — one that requires a systematic, evidence-based approach that goes far beyond purchasing technology.

In this hands-on workshop, telehealth implementation expert Christian Milaster will equip you with the tools and techniques to confidently expand your telehealth offerings — whether you're launching your first service or scaling an existing program to meet RHTP requirements.

This workshop will prepare you to evaluate and implement services like:

- Site-to-site visits and ad hoc Tele Urgent Care
- Integrated Behavioral Health handoffs and TelePsychiatry
- Teledentistry, Telepharmacy, and specialty care access
- Remote Physiological Monitoring (RPM) for chronic disease management, readmission prevention, and Hospital at Home
- Secure messaging and AI-powered care coordination tools

Key Takeaways: After attending this workshop, you will be able to:

1. Identify and prioritize your best telehealth opportunities — Assess your community's needs, your organization's readiness, and your clinical and financial landscape.
2. Navigate and overcome implementation barriers — Apply proven methods to address the common obstacles: workflow resistance, technology missteps, credentialing complexity, and the "vendor trap" that sinks well-funded initiatives before they reach patients.
3. Implement a complete launch framework — Walk away with a systematic methodology for every phase of the telehealth implementation lifecycle: identifying the opportunity, designing the service, selecting the right technology, validating with a proof of concept, and deploying at scale.
4. Build for sustainability from day one — Understand what CMS looks for when evaluating RHTP-funded telehealth programs, how to design services that meet federal sustainability requirements.
